

BOAS FOREDRAG FOR MEDLEMMER I NORSK MOPSKLUBB

Norsk Mops Klubb inviterer sine medlemmer til et foredrag om BOAS
torsdag 23. januar 2020 kl 18.00 i NKK's lokaler på Holmlia (Nordåsveien 5, 1251 Oslo)
Foredragsholder: Maria Kjeldaas Johannessen, veterinær NKK

Innholdet i foredraget vil være informasjon om BOAS og selve BOAS-graderingen.

Forelesningen er gratis, men pga lokalene ønsker vi bindende påmelding til seminaret.

Påmelding kan gjøres på mail til: ann.helen.olsen@gmail.com innen 15. januar 2020.

Grading of nostril stenosis in pugs

Increasing risk of BOAS →

Grade I	Grade II	Grade III	Grade IV
Open nostril	Mildly stenotic nostrils	Moderately stenotic nostrils	Severely stenotic nostrils
Nostrils are wide open. During exercise, the nostril wings should move dorso-laterally (upwards and outwards) to open on inspiration.	Slightly narrowed nostrils but the lateral (outer) nostril wall does not touch the medial (inner) nostril wall. During exercise, the nostril wings should move dorso-laterally (upwards and outwards) to open on inspiration.	The lateral (outer) nostril wall touches the medial (inner) wall at the dorsal (upwards) part of the nostrils and the nostrils are only open at the bottom. During exercise, the nostril wings are not able to move dorso-laterally (upwards and outwards) and there may be nasal flaring (i.e. muscle contraction around the nose trying to enlarge the nostrils but failed).	Nostrils are almost closed. The dog may switch to oral breathing with stress or very gentle exercise such as playing. During exercise, the nostril wings are not able to move dorso-laterally (upwards and outwards) and always presents with nasal flaring.
